

NUGEN Audio

Focus Elements

Streamlined & accessible

Gain access to the same powerful algorithms used in the full Focus bundle via a streamlined, accessible interface. Focus Elements bears the hallmarks of NUGEN Audio quality, providing clear real-time visual feedback to enable rapid control choices.

Stereo enhancement, correction and bass management in an instant, with the assurance of superb mono compatibility and no unwanted artefacts.

Rapid & intuitive

- Stereo enhancement
- Bass management
- Frequency specific panoramic placement
- Stereo image reconstruction
- Clear visual feedback

Stereo enhancement

Use Stereoizer Elements for a more coherent sound with polish and spatial balance, and your mix will still sound great in mono. Introduce a feeling of natural space, or push the

envelope for full, super-wide expansion of the stereo image through a highly accessible interface.

Bass management

Use all your favourite effects - even wide stereo reverb, delays and chorus - without losing focus and punch in the low end. Through the user-friendly controls, Monofilter Elements will quickly anchor your low frequencies, while retaining the character of the original audio. Now you can sharpen, define and align your bass for the tightest mix.

Frequency specific panoramic placement

Just choose the position you want and let us take care of the rest. Stereoplacer Elements is designed for the realignment, correction and redistribution of stereo balance by frequency – in other words, you can pan different frequencies without panning the entire track.
